Salvestrols vs. Cancer: The story continues this Thursday

Health Action Network Society Presents:

For the past year, HANS has been following the fascinating Salvestrol discoveries of Gerry Potter and Danny Burke. We are now pleased to present the next chapter in this story. Anthony Daniels, a recognized authority in the UK herbal industry, will be speaking about Salvestrols for HANS on Thursday, April 27, 2006 at 7 PM. To pre-register for this exciting lecture, [click here](#), or call us at 604-435-0512.

Want to learn more about the healing powers of food?

Are you facing cancer or wanting to prevent it?

Come to find out more about how our food is losing cancer fighting nutrients such as salvestrols:

Where do we get salvestrols?

- Organically grown fruits,
- berries,
- and vegetables.

Research has shown salvestrols can destroy cancer cells without harming healthy tissue.

Anthony Daniels, recognised authority in the UK herbal industry, utilised his discoveries made in the banana plantations to develop the extraction technology that is used to produce Salvestrol supplements. Through a combination of public lecture and interaction with the audience, Anthony Daniels will show how Salvestrols are being removed from the food chain at an alarming rate.

Anyone interested in cancer, or diminishing food quality, should attend.

"There has to be a significant change in the way that we approach food, in the way we grow food, and the way that we see our diet."

Anthony Daniels, Managing Director, Nature's Defence, Leicester, England

7:00 PM, Thursday, April 27, 2006

Firefighter's Social Club, 6515 Bonsor Avenue, Burnaby (5 minute walk east of Metrotown SkyTrain station)
