Chris...I have a friend that has a daughter on the last leg of fighting her cancer, she was informed by the Cancer Clinic that they can do no more for her so her father arranged to get her Vit C dosage with and IV, she has had two infusions as of this date however she was informed that the needles used for her Chemo Therapy has made it nearly impossible to find a useable vein to insert a "stint" and asked to to request the help of the London Cancer Clinic in having a IV stint inserted to aid them in giving her Vit C Intravenously, the MD at the Cancer Clinic out and out refused to help her in any way only saying that they don't believe in the use of Vit C as part of the protocol in fighting cancer and that she is going to die anyways. Do you know of anyone in the London area that she could go to for this help??? she travels to Cambridge for the Vit C treatments and right now needs all the help she can get, I would really appreciate any input you can offer, thank you.
